

Put Seep on your Android phone

About a minute. No Play Store, no download, no cost.

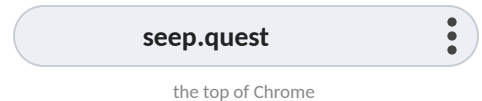

Point your camera here to open Seep

Before you start: use **Chrome** (the red, yellow, green and blue circle). Other browsers can add a shortcut, but they may open Seep inside the browser instead of full screen.

1 Open Chrome and go to `seep.quest`

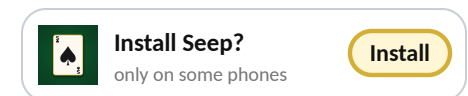

Wait until the Seep home page has finished loading.

the top of Chrome

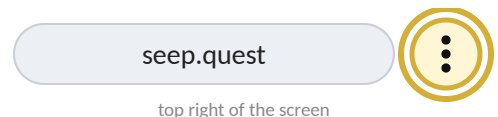

2 If a bar at the bottom says Install Seep, tap Install

Then skip to step 5. Many phones do not show this bar; that is fine.

3 Otherwise tap the **:** menu

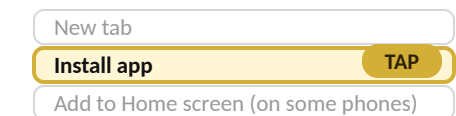

Three dots, at the top right of Chrome.

top right of the screen

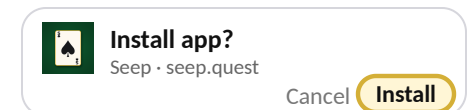

4 Tap Install app

On some phones it says **Add to Home screen** instead. If Chrome then offers two choices, pick **Install**, not “Create shortcut”.

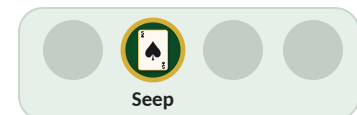

5 Tap Install to confirm

Some phones then ask once more where to put it: tap **Add**.

6 Find the Seep icon and tap it

Look for the green card with a spade, on your home screen or in your app list. Seep opens full screen, with no address bar.

Good to know

- Sign in the same way you do on the website.
- **Invite links:** depending on your phone, a link a friend sends may open in Chrome rather than in the Seep icon. If so, in the Seep icon tap **Play online**, find **Join a table**, type the 6 letters at the end of the link in **Table code** and tap **Join** (`seep.quest/join/ABC234` has the code ABC234).
- Seep needs the internet. With no signal you will see a friendly “You're offline” page.
- To remove it: touch and hold the icon, then tap **Uninstall**.

If something looks different

- **No Install option?** Use Chrome, update it from the Play Store, reload the page and open the **:** menu again.
- **It still shows the address bar?** That is a shortcut, not the app. Remove it and repeat, choosing **Install**.
- Menu names vary a little between phone makes.
