

Put Seep on your iPhone

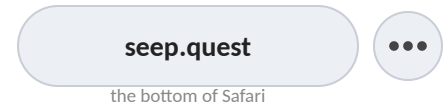

About a minute. No App Store, no download, no cost.

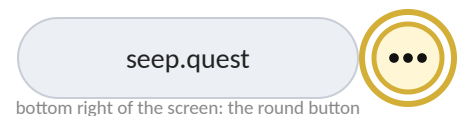

Point your camera here to open Seep

Before you start: use **Safari** (the blue compass icon). If a Seep link opened inside another app (Messages, Facebook, Instagram), open Safari yourself and type **seep.quest**.

- 1 Open Safari and go to `seep.quest`**
Wait until the Seep home page has finished loading.

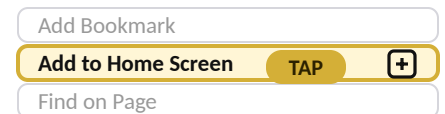

- 2 Tap the “...” button**
It is at the bottom right of the screen. *Older iPhones: skip this step; Share is the square-with-an-arrow button at the bottom.*

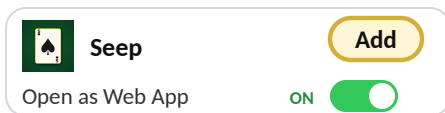

- 3 Tap Share**
It is in the menu that opens.

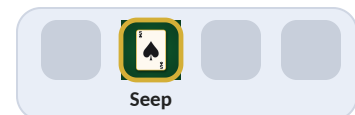

- 4 Scroll down and tap Add to Home Screen**
It is further down than you expect. Keep scrolling; if you only see a short list, tap “View More”.

- 5 Keep Open as Web App switched on, then tap Add**
The name can stay “Seep”. (Not shown on older iPhones; just tap Add.)

- 6 Find the Seep icon and tap it**
Look for the green card with a spade. Seep now opens full screen, like any app.

Good to know

- The first time, **sign in again** inside the Seep icon. It keeps its own sign-in, separate from Safari.
- **Invite links:** a link a friend sends you opens in Safari, not in the Seep icon. In the Seep icon, tap **Play online**, find **Join a table**, type the 6 letters at the end of the link in **Table code** and tap **Join** (the link `seep.quest/join/ABC234` has the code ABC234).
- Seep needs the internet. With no signal you will see a friendly “You’re offline” page.
- To remove it: touch and hold the icon, tap **Remove App**, then confirm.

If something looks different

- **No “Add to Home Screen”?** Make sure you are in Safari itself, not inside another app, and scroll further down the list.
- **Opens in Safari, not full screen?** “Open as Web App” was off. Remove the icon and add it again with it on.
- The wording is from iPhones with iOS 26 and can differ slightly on yours.
